How will the MYST book's LCD screen work? Does it run on rechargeable or replaceable batteries, or magic?

Lloyd Woodall - 2018-04-12 - in [MYST 25](#)

The linking panel screen is a 800x480 IPS LCD screen. It is currently planned to be powered by a rechargeable Li-ion flat pack firemarble (via USB) that should be able to be unplugged and replaced from the main logic board (some disassembly might be required).

Evidently magic will play a big part in the process (but travel to other Ages is not guaranteed).
