I'm stuck at "Initializing Patcher..."

ABiegalski - 2021-10-19 - in Patcher/Launcher Issues

The launcher will not progress past the "Initializing Patcher" message. What do I do?

There may already be an instance of the patcher running on your computer.

- Open the Task Manager (CTRL + SHIFT + ESC)
- Click on the Processes tab
- Select 'UruLauncher.exe'
- Click 'End Process'

After doing this, start the patcher again.

If you continue to get the error message even after trying the above steps, please restart your computer and try again.
