I selected Crow (show), and I got a message saying that "someone else is crowing". What do I do?

Lloyd W - 2020-10-13 - in Crowbox for iOS

That means that someone nearby is also trying to Crow. First check with your nearby friends & family verbally to see if someone accidentally touched the Crow button instead of the View button.

If not, then you should consider setting your Crowing to private by entering a private ID. Then tell all your viewers to go to settings and set the private ID to the private ID that you entered.
