Myst - 1.1.5

Vicki Almond - 2021-04-10 - in [Release Notes](#)

Myst - 1.1.5

Welcome to version 1.1.5

There are only a few fixes/improvements in this update, but the most important is the fix for the crash on load when restoring a game that was the black screen bug from 1.0.1.

[Bug Fixes:](#)

- + Fixed crash when restoring black screen from bug in previous version
- + Fixed crash when accessing forum or support page from in-game browser
- + Fixed hour tens digit error (in planetarium control panel) in OS 3.0

Improvements/Modifications:

- + Red and blue pages automatically start book movies
- + Added "Reset Current Game" option in iPhone/iPod Touch Settings*

* The "Reset Current Game" setting is not in the option screen within Myst. It is in the iPhone/iPod Touch Settings app, which should be in the first page of all your apps (the one with gears for an icon). Look in the lower section of the Settings page (where all the apps stick their settings) and look for Myst. After selecting Myst, you will see the "Reset Current Game" setting, which defaults to OFF. Turn this setting to ON to reset the current game. You should only need to do this if for some reason the current game causes a crash when Myst is loaded, making it impossible to get into the game. After Myst is loaded, this setting will be reset to OFF.

Thanks from the entire Myst team!
