Myst III: Exile fails to save/load/run in MacOS Catalina

Lloyd W - 2020-06-18 - in [Myst III: Exile](#)

Issue: After buying and installing Myst III on my Mac running OS Catalina, I found I could not run, save, or load games!

Solutions: Grant "Full Disk Access" to Myst III in the Accessibility and Privacy Settings.

If this fails to allow Myst III to run, save, or load games, try the following: Start Myst III using "sudo" from the terminal.

Running the game using "sudo open" should resolve the issue.
