## Why is it that sometimes when I click an object to interact with it, nothing happens?

Marc Ferrell - 2019-11-05 - in [Gameplay Questions](#)

Q: Why is it that sometimes when I click an object to interact with it, nothing happens?

A: Some objects (certain large valves or levers or switches) only respond to dragging - moving the object with your mouse. Try clicking an object first - if it doesn't seem to respond, maybe you can pull it or rotate it by dragging the mouse cursor.
