Why is it that sometimes when I touch an object to interact with it, nothing happens?

Vicki Almond - 2019-11-06 - in Gameplay Questions

Why is it that sometimes when I touch an object to interact with it, nothing happens?

Some objects (certain large valves or levers or switches) only respond to dragging - moving the object with your finger. Try touching an object first - if it doesn't seem to respond, maybe you can pull it or rotate it by dragging.
